Priority number(s): JP19880237175 19880921

Abstract of JP2091254

PURPOSE: To obtain a fabric without the need for sewing by integrating along with fixing at the end of knitting completion both front and back fabrics knitted by a flat knitting machine having plural beds.

CONSTITUTION: Left and right front parts 5, 6 are knitted with a front bed, while a back part 7 with a back bed. Both the front and back parts are superposed on shoulder lines 8, 9, and 'fushime' is formed from both the side ends of the fabric to the final end treated knitted part to stitch said front and back parts together. At the coincidence of the 'fushime' from both the ends of the fabric towards the central part, several courses of loops are formed through the leap of both the 'fushime' by only one well portion.
